DETAILED ACTION

The indicated allowability of claims 6-16 and 22-24 is withdrawn. Rejections based on double patenting and the newly cited reference follow.

Claim Objections

1. Claims 11 and 22 are objected to because of the following informalities:

Claim 11 recites the limitation "the switch network". There is insufficient antecedent basis for this limitation in the claim.

Claim 22 recites the limitation "the first comparator". There is insufficient antecedent basis for this limitation in the claim.

Appropriate correction is required.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., In re Berg, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); In re Goodman, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); In re Longi, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); In re Van Ornum, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Page 3

2. Claims 6-8, 10, 11, and 16 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 18 and 19 of U.S. Patent No. 6,934,645.

Although the conflicting claims are not identical, they are not patentably distinct from each other because they teach the same subject matter.

Regarding claim 6, Kim 6,934,645 (hereinafter referred to as Kim '645) teaches a comparator configured to receive a sense voltage that is indicative of a sensed temperature (column 11, lines 32-34); a temperature reference circuit coupled to the comparator, the temperature reference network having a plurality of reference voltages including at least a first and a second reference voltage (column 11, lines 35-40); and a control circuit coupled to the temperature reference circuit such that the control circuit controls alternately compares the plurality of reference voltages to the sense voltage, the control circuit further configured to receive a plurality of outputs from the comparator indicative of the comparisons of the plurality of the reference voltages to the sense voltage and wherein the control circuit determines when the sense voltage is between the first and second reference voltages (column 12, lines 7-12).

Regarding claim 7, Kim '645 teaches a trimmer coupled to the temperature reference circuit that is independently adjustable to adjust the plurality of reference voltages (column 12, line 12).

Regarding claim 8, Kim '645 teaches that the trimmer is a potentiometer with adjustable resistance to correct for input offset voltage in the comparator (column 12, lines 15-16).

Regarding claim 10, Kim '645 teaches a sensing device configured to sense the sensed voltage that varies with changes in temperature at the sensing device and that provides the sensed voltage to a first input of the comparator (column 11, lines 32-34).

Regarding claim 11, Kim '645 teaches a switch circuit coupled between the temperature reference circuit and a second input of the comparator and controlled by the control circuit such that the plurality of reference voltages are alternately applied to the second input and compared to the sense voltage by opening and closing switches in the switch circuit (column 11, lines 38-40).

Regarding claim 16, Kim '645 teaches a random access memory device (column 11, line 31).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 22 and 23 are rejected under 35 U.S.C. 102(b) as being anticipated by Watanabe (US 4,213,125).

Regarding claim 22, Watanabe teaches a comparator configured to receive a sense voltage that is indicative of a sensed temperature (Ref. 114); switched means coupled to the comparator for alternately comparing a first and second reference voltages with the sense voltage to produce a first and second comparison results (Ref. 115-118); latch means coupled to the

Art Unit: 2863

comparator for holding first and second comparison results (Ref. 110-113); and control means for determining from the first and second comparison results whether the sense voltage is between first and second reference voltages (column 1, lines 61-66).

Regarding claim 23, Watanabe teaches a reference network for providing the first and second reference voltages (column 1, lines 34-37).

Allowable Subject Matter

4. Claims 9, 12-15 and 24 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

The primary reason for the indication of allowability of claim 9 is the inclusion of the limitation that the trimmer is multiple resistors that may be removed and added to the trimmer in order to provide adjustable resistance to correct for input offset voltage in the comparator. It is this limitation in the claimed combination that has not been found, taught, or suggested by the prior art that makes these claims allowable.

The primary reason for the indication of allowability of claim 12 is the inclusion of the limitation of first and second latches coupled to an output of a comparator such that the first latch holds a first comparison signal representative of a first comparison of the first reference voltage with the sense voltage and such that the second latch holds a second comparison signal representative of a second comparison of the second reference voltage with the sense voltage. It

Application/Control Number: 10/808,190 Page 6

Art Unit: 2863

is this limitation in the claimed combination that has not been found, taught, or suggested by the prior art that makes these claims allowable.

The primary reason for the indication of allowability of claim 24 is the inclusion of the limitation of trimmer means coupled to the reference network for independently adjusting the first and second reference voltages. It is this limitation in the claimed combination that has not been found, taught, or suggested by the prior art that makes these claims allowable.

5. Claims 1-5, 17, and 19-21 are allowed.

The following is an examiner's statement of reasons for allowance: Please see previous office action and applicant's response for reasons for allowance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.
